"Sequence organisation and transcriptional regulation of the mouse elastase II and trypsin genes.";

Nucleic Acida Res. 14:8307-8330(1986).
-!- FUNCTION: ACTS UPON BLASTIN.
-!- CATALYTIC ACTIVITY: Preferential cleavage: Leu-|-Xaa, Met-|-Xaa and Phe-|-Xaa. Hydrolyzes elastin.
-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: PANCREAS.
-!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1. ELASTASE SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SIMILARITY).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 10, Application US/09074660

Fatent No. 6020183

GENERAL INFORMATION

APPLICANT: LOOSMORE, Sheena M.
APPLICANT: CHONG, Pale
APPLICANT: CHONG, Pale
APPLICANT: CHONG, Pale
APPLICANT: COMEN, Raymond P.
APPLICANT: CALEIN, Michel H.
ITLE OF INVENTION: Raduced Protease Activity
ITLE OF INVENTION: Reduced Protease Activity

NUMBER OF ENGUENCES:
ADDRESSEE SIM & MCBUTNEY

STREET: 6th Floor, 330 University Avenue
CITY: Toronto
                                                                                                                                                                    GENERAL INFORMATION:
APPLICANT: LOOSMORE, Sheena M.
APPLICANT: TANG, Yan-Ping
APPLICANT: TONG, Yan-Ping
APPLICANT: COMEN, Yan-Ping
APPLICANT: COMEN, Raymond P.
APPLICANT: COMEN, Michael H.
TITLE OF INVENTION: MACALOG OF HAEMOPHILUS HIN47 WITH REDUCED
NUMBER OF SEQUENCES: 23
CORRESPONDENCE ADDRESS: 23
ADDRESSEE: Sim & MCBURNERY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Length 228;

US-10-036-371-6
Sequence 6, Application US/10036371
Sequence 6, Application US/10036371
Sequence 6, Application US/10036371
GENERAL INFORMATION:
APPLICANT: BARANARSON, JON B.
TITLE OF INVENTION: FISH SERINE PROTEINASES AND THEIR PHARMACEUTICAL AND TITLE OF INVENTION: COSMETIC USE
FILE REFERENCE: 81691/264560
CURRENT APPLICATION NUMBER: US/10/036,371
CURRENT FILING DATE: 1999-10-12
PRIOR APPLICATION NUMBER: 5086/99
PRIOR PILING DATE: 1999-06-18
NUMBER OF SEQ ID NOS: 8
SOFTWARE: Patentin Ver. 2.1
SEQ ID NO 6
LENGTH: 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               LOCATION: (130)

Patent No. US20020076721A1

GENERAL INFORMATION:

APPLICANT: Pyle, Ruth A.

APPLICANT: AL, Jiangchun

APPLICANT: AL, Jiangchun

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE THERAPY

TITLE OF INVENTION: AND DIAGNOSIS OF PANCREATIC CANCER

FILE REFERENCE: 210121.553

CURRENT APPLICATION NUMBER: US/09/923,779

CURRENT APPLICATION NUMBER: 155

CURRENT APPLICATION NUMBER: 1501-08-06

NUMBER OF SEQ ID NOS: 155

SOFTWARE: FRAESEQ for Windows Version 4.0

FENCENTIAL OF 152
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           .

Sequence 23, Application US/09981353

Patent No. US202016038241

GENERAL INFORMATION:

APPLICANT: Lasek, Amy W.

APPLICANT: Jones, David A.

TITLE OF INVENTION: GENES EXPRESSED IN COLON CANCER

TITLE PERFERENCE: PA-0038 US

CURRENT APPLICATION NUMBER: US/09/981,353

CURRENT FILING DATE: 2001-10-11

WINHER OF SEQ ID NOS: 194

SOFTWARE: PELL Program

SOTTWARE: PELL PROGRAM

SOFTWARE: PRT

CORGANISM: Homo sapiens

FRATURE:

FRATURE:

NAME/KEY: misc feature

CHER INFORMATION: Incyte ID No. US20020160382A1 991163CD1

Bjarnason JB; Sequence Query Match 요 ઠે This invention describes a novel method for the use and preparation of cell activating compositions which involves preparing a cell activating cell activating composition compositions which involves preparing a cell activating composition comprising (a) homogenizing pancreatic tissue in buffer at about neutral or higher ph to produce a homogenate, (b) removing particulates from the homogenate, (c) optionally incubating the particulates removed, with a protease; and cell activation activity. The methods can be used for improving treatment outcome or reducing risk of treatment of e.g. cardiovascular celseament outcome or reducing risk of treatment of e.g. cardiovascular celseamer, inflammatory disease, trauma, autoimmune diseases, arthritis, organ rejection, disbetes and diabetic complications, stroke, ischemia, cretingathy, disbetes, venous insufficiency, unstable angina or trauma. They can be used in the veterinary treatment of a non-human subject. They can be used in the veterinary treatment of a non-human subject. They can be used to lower cell activation resulting from the veterinary preatment of an elevated level of hydrogen peroxide in plasma or whole blood and in the elevated level of hydrogen peroxide dismitase (SOD) indicates leukocyte up to presence of superoxide dismitase (SOD) indicates leukocyte up to presence of by indicative of the onset of an acute cardiovascular disorders, such as disease onset or ischemic complications. An elevated correct of hydrogen peroxide in plasma or whole blood and in the presence of SOD is indicative of a chronic or immune compromised confittion e.g. hypertension or sepsis. AAYSO201-YSO334 represent peptides confittion e.g. hypertension or sepsis. AAYSO201-YSO334 represent peptides ô Use of cell activating compositions in developing products for diagnosis and treatment of e.g. cardiovascular, inflammatory, autoimmune or Alzheimer's disease, trauma, arthritis, organ rejection, diabetes, stroke or ischemia -Gaps ö 100.0%; Score 68; DB 20; Length 13; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                g
                                                                                                                                                 This invention describes a novel method for the use and preparation of cell activating compositions which involves preparing a cell activating compositions composition comprising of a homogenizing pancreatic tissue in buffer at composition comprising (a) homogenizing pancreatic (b) removing about neutral or higher pH to produce a homogenate; (b) removing the about neutral or higher pH to produce a homogenate; (c) optionally incubating the about the homogenate and selecting fractions that exhibit resulting the homogenate and selecting fractions that exhibit cell activation activity. The methods can be used for improving treatment outcome or reducing risk of treatment of e.g. cardiovascular corgan rejection, diabetes and diabetic complications, stroke, ischemia, Alzhenmer's disease, myocardial infarction, heamorthagic shock, diabetic retinopathy, diabetes, wence insufficiency unstable angina or trauma. Criby can be used in the veterinary treatment of a non-human subject. Protease inhibitors can be used to lower cell activation realting from hydrogen peroxide can be used to lower cell activation realting from clevated level of hydrogen peroxide in plasma or whole blood and in the regulation, e.g. indicative of the onset of an acute cardiovascular disorders, such as disease onset or ischemic complications. An elevated level in plasma or whole blood and a low level in the presence of SoD is indicative of an acute cardiovascular condition e.g. hyperension or sepsis. AAVSGO21-YSGO314 represent peptides

The present sequence is bovine chymotrypsinogen. It was included in a review of sequence homologies of several plasminogen activators.

Plasminogen is the principal serine protease zymogen in the prample of vertebrates. Its active form, plasmin, is implicated in pericellular proteolysis associated with a wide range of physiological and pathological processes. Plasminogen expression is physiological and pathological processes. Plasminogen expression is plasminogen to convert it to plasmin or form tight binding complexes plasminogen to spontaneously convert it to plasmin or form tight binding complexes with plasminogen to spontaneously convert it to plasmin. The sequence concluded in this peptide is particularly useful when inserted basminogen activation. This peptide is particularly useful when inserted between amino acid residues 64 and 645 of full length human inserted plasminogen. Novel plasminogen activators have been made based upon the plasminogen are useful in preparing thrombolytic agents for treating the plypeptides are useful in preparing thrombolytic agents for treating concluded the plant of the plasminogen are useful in preparing thrombolytic agents for treating concluded the plant of the plasminogen are useful in sentered.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0
                                                                                               Polypeptide with plasminogen activator activity useful as thrombolytic agent for treating blood clot disorders e.g. heart attack, comprises 10 amino acid peptide fragment for recognition or activation of

AAC98773 to AAC99231 encode the human pancreatic cancer associated processing called pancreatic cancer antigens have cytosteria.

Expectens, called pancreatic cancer antigens have cytosteria.

ABS5466. The human pancreatic cancer antigens have cytosteria.

Compression of the control of the control of the called for cardiant and antinflammatory relaxant, contraceptive, conversing the cardiant and antinflammatory activities, and can be used for in gene therapy. The polynucleotide and proteins can be used for the preventing treating, or ameliorating a medical condition or in assays or subject. Binding partners to the proteins and the activity of the cambiect. Binding partners to the proteins and the activity of the control or an engage of the control of the cardiant of the c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; protease, cancer; immune-related disorder; cardiovascular disease; neuronal-associated disease; metabolic disorder; inflammatory disorder; nervous system disorder; sexual dysfunction; pain; mood disorder; hypertension; psychotic disorder; neurological disorder; dyskinesia; viral infection; human immunodeficiency virus; HIV; non-viral infection;
     New nucleic acid that is a pancreatic cancer antigen for preventing, treating, or ameliorating a medical condition, particular pancreatic cancer, or for use in assays for diagnosing a pathological condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Caenepeel S;

The present invention relates to the isolation of novel human processes, and the nucleic acids encoding them. The sequences of the invention are useful for treating diseases and disorders such as cancers (e.g. breast, colon, lung), immne-related diseases and disorders and concers (e.g. inflammatory diseases and acthma), cardiovascular diseases (e.g. inflammatory diseases and acthma), cardiovascular diseases (e.g. inflammatory diseases, e.g. diabetes, obseity), inflammatory diseases, metabolic disorders (e.g. diabetes, obseity), inflammatory ciscarders (e.g. rheumatoid arthritis and psoriasis), central or corrigheral nervous system diseases, migraines, pain, sexual dysfunction, condisorders, attention disorders, neurological disorders hypotension, contral or condisorders, and sease, Parkinson's disease) and dyskinesias.

The nucleic acids and polypeptides are also useful for treating viral infections caused by human immunodeficiency virus (HIV), and non-viral infections caused by human immunodeficiency virus (HIV), and non-viral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Cell activation; pancreas; treatment; cardiovascular disease; trauma; inflammatory disease; autoimmune disease; arthritis; disbetes; stroke; organ rejection; ischemia; Alzaheiner's disease; myocardial infarction; haemorrhagic shock; diabetic retinopathy; venous insufficiency; angina; trauma; protease inhibitor; hypertension; sepsis.

This invention describes a novel method for the use and preparation of cell activating compositions which involves preparing a cell activating composition to higher ph to produce a homogenatic tissue in buffer at about neutral or higher ph to produce a homogenatic in buffer at centifing homogenate, (d) formogenate, (b) removing the particulates removed, with a protease; and fractionating the homogenate and selecting fractions that exhibit compared to treatment outcome or reducing risk of treatment of e.g. cardiovascular circatment outcome or reducing risk of treatment of disease, arthritis, disease, inflammatory disease, trauma, autoimmune diseases arthritis, arthritis or organ rejection, diabetes and diabetic complications, stroke, ischemia, cretinopathy, diabetes, venous insufficiency, unstable angian or trauma. Cretoses inhibitors can be used to lower cell activation resulting from the veterinary treatment of a non-human subject. They can be used in the veterinary treatment of a non-human subject. Creatment elevate can be used to dower cell activation resulting from charges levale of hydrogen peroxide in plasma or whole blood and in the comparation. An indicates leavence of superoxide dismutase (SOD) indicates leuckoyen peroxide of superivor of the neutron of substitution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    regulation, e.g. indicative of the onset of an acute cardiovascular disorders, such as disease onset or ischemic complications. An elevated the presence of SoD is indicative of a chronic or immune compromised condition e.g. hypertension or sepsis. AAY$0201-Y$0334 represent peptides used in the method of the invention.
Use of cell activating compositions in developing products for diagnosis and treatment of e.g. cardiovascular, inflammatory, autoimmune or Alzheimer's disease, trauma, arthritis, organ rejection, diabetes, stroke or ischemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Cell activation; pancreas; treatment; cardiovascular disease; trauma; inflammatory disease, autoimmune disease; arthritis; diabetes; stroke; organ rejection; ischemia; Alzheimer's disease; myocardial infarction; haemorrhagic shock; diabetic retinopathy; venous insufficiency; angina; trauma; protease inhibitor; hypertension; sepsis.

This invention describes a novel method for the use and preparation of cell activating compositions which involves preparing a cell activating compositions omprisang (a) homogenizing pancreatic tissue in buffer at composition compusing (a) homogenizing pancreatic tissue in buffer at about neutral or higher pH to produce a homogenate, (b) removing particulates from the homogenate, (c) optionally incubating the creatility homogenate, with particulates removed, with a procease; and cell activation activity. The methods can be used for improving treatment outcome or reducing risk of treatment of e.g. cardiovascular or significant disease, inflammatory disease, frauma, autoimmune diseases, arthritis, disease, myocardial infarction, hemorrhagic shock, diabetic complication be used in the veterinary treatment of a non-human subject.

Alzheimer's disease, worder insufficiency, unstable angina or traumance procease inhibitors can be used to lower cell activation resulting from procease inhibitors can be used to lower cell activation resulting. The presence of superoxide dismutase (SOD) indicates leukocyte up created level of hydrogen peroxide in plasma or whole blood and in the regulation, e.g. indicative of the anche cardiovascular clavel of hydrogen peroxide in plasma or whole blood and in the cell of hydrogen peroxide in plasma or whole blood and a low level in the method of the invention.

Che condition e.g. hypertension or sepsis. AAYSO201-YSO334 represent peptides

AAC98773 to AAC99231 encode the human pancreatic cancer associated proteins, called pancreatic cancer antigens, given in AAB54008 to proteins, called pancreatic cancer antigens have cytostatic.

C. AAB54466. The human pancreatic cancer antigens have cytostatic, contraceptive, noctropic, immunomodulatory, relaxant, contraceptive, cytostatic, and can antificiammatory activities, and can be used for in gene therapy. The polymucleotide and proteins can be used for cytoring a pathological condition or a susceptibility to one in a subject. Binding partners to the proteins and the activity of the cubject. It is a pathological condition or a susceptibility to one in a cytorian can be identified. The pancreatic cancer antigens can be used to generate cancer antigens to the antigens can be screened for. The Agonists and antagonists to the antigens can be used to design nucleic and hybridisation probes that can be used in chromosome mapping, linkage can diagnostic methods. The proteins can be used to generate antibodies which are used to purify, detect and target the polypeptides, including which are used to purify, detect and target the polypeptides, including which are used to purify, detect and target the polypeptides, including both in vivo and in vitro diagnostic and therapeutic methods: The both in vivo and in vitro diagnostic and therapeutic methods are proteins can be used to treat or prevent neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, remal or proliferative disorders. AAC99232 to AAC99240 and AAB54467 represent invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           BSSP5; serine protease; human; hBSSP5; mouse; mBSSP5; brain; diagnostic marker; antibody; transgenic animal; Alzheimer's disease; epilepsy; cancer; inflammation; infertility; pancreatitis; prostatic hypertrophy.
                                                                                                                                                                                                              New nucleic acid that is a pancreatic cancer antigen for preventing, treating, or ameliorating a medical condition, particular pancreatic cancer, or for use in assays for diagnosing a pathological condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            72.1%; Score 49; DB 21; Length 192; 72.7%; Pred. The invention relates to novel serine protesses designated BSSP5

(AABI1710-B11711), and to nucleic acids encoding them (AAA61733-A61734).

(AABI1710-B11711), and to nucleic acids encoding them (AAA61733-A61734).

(The invention also relates to vectors and transformants comprising BSSP5

(The invention also relates to vectors and transformants comprising BSSP5

(Can be varied) and am BSSP5 knockout mouse. The invention additionally compasses anti-BSSP5 knockout mouse. The invention of such cantibodies, methods of BSSP5 detection using the antibodies, and the antibodies, methods of BSSP5 detection using the antibodies, and the canditions of tagments as diagnostic markers for certain use of BSSP5 proteins or fragments as diagnostic markers for certain used calculations of tagments as diagnostic markers for certain and a pancreatitis diagnostic agent containing an anti-BSSP5 urine, and a pancreatitis diagnostic agent containing an anti-BSSP5 contained in a human brain converted regions of serine protesses. The BSSP5 serine protesses and nucleotides encoding them are useful in the protesses and th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     BSSP5; serine protease; human; hBSSP5; mouse; mBSSP5; brain; diagnostic marker; antibody; transgenic animal; Alzheimer's disease; epilepsy; cancer; inflammation; infertility; pancreatitis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                detecting homologues, mutants and polymorphic variants in biological samples (e.g., blood, wrine, brain, prostate gland, placenta, testis, pancreas and spleen) as diagnostic markers for conditions such as Alzaheimer's disease, epilepsy, cancer, inflammation, infertility, pancreatitis and prostatic hypertrophy, Sequence ABB1710 represents human BSSP5 (hBSSP5), and sequence AAB11711 represents murine BSSP5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Unidentified
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                   The invention relates to novel serine proteases designated BSSP5

(AAB11710-B11711), and to nucleic acids encoding them (AAA61733-A61734).

The invention also relates to vectors and transformants comprising BSSP5

uucleic acids; transgenic animals in which the expression level of BSSP5

can be varied; and an mBSSP5 knockout mouse. The invention additionally

encompasses anti-BSSP5 antibodies and methods of production of such

antibodies, methods of BSSP5 detection using the antibodies, and the

compasses anti-BSSP5 antibodies and adaptositic markers for certain

use of BSSP5 proteins or fragments as diagnostic markers for certain

compareatitis comprising measuring BSSP5 concentration in the blood or

pancreatitis comprising measuring BSSP5 concentration in the blood or

contine, and a pancreatitis diagnostic agent containing an anti-BSSP5

contine, and a pancreatitis diagnostic agent containing an anti-BSSP5

contibody is also disclosed. Nucleotides encoding BSSP5 were initially

contained in a human brain cDNA library using degenerate pCR primers

contained in a human brain cDNA library using degenerate pCR primers

contained and proceases and nucleotides encoding them are useful in

contained and spleen) as diagnostic markers for conditions such as

contained and spleen) as diagnostic markers for conditions such as

conditions and spleen) as diagnostic markers for conditions such as

conditions and spleen) as diagnostic markers for conditions such as

conditions and prostatic hypertrophy. Sequence AAB11711 represents murine BSSP5

conditions and prostatic hypertrophy.

This invention describes a novel method for the use and preparation of cell activating compositions which involves preparing a cell activating compositions which involves preparing a cell activating composition compression to the composition composition composition composition composition composition in buffer at about neutral or higher pH to produce a homogenating buffer at cabut neutral or higher pH to produce a homogenating the new composition of the composition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    regulation, e.g. indicative of the onset of an acute cardiovascular disorders, such as disease onset or ischemic complications. An elevated level of hydrogen peroxide in plasma or whole blood and a low level in the presence of SOD is indicative of a chronic or immune compromised condition e.g. hypertension or sepsis. AAY50201-Y50334 represent peptides used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Use of cell activating compositions in developing products for diagnosis and treatment of e.g. cardiovascular, inflammatory, autoimmune or Alzheimer's diagease, trauma, arthritis, organ rejection,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   .

```
This invention describes a novel method for the use and preparation of cell activating compositions which involves preparing a cell activating composition (a) homogenizing pancreatic tissue in buffer at about neutral or higher pH to produce a homogenate; (b) removing composition composition (a) but to produce a homogenate; (b) removing the creating homogenate, with particulates removed, with a protease; and feating homogenate, with particulates removed, with a protease; and the resulting homogenate, with particulates removed, with a protease; and the retivation activator. The methods can be used for improving creating artivation activator, disease, trauma, etc. organ rejection, diabetes and diabetic complications, stroke, ischemia, alternate of diabetes and diabetic complications, stroke, ischemia, and the vectoriant of a non-human subject.

Cretinapathy, diabetes, venous insufficiency, unstable angina or trauma. They can be used in the vectoriant treatment of a non-human subject.

Cretinapathy, diabetes, venous insufficiency, unstable angina or trauma. They can be used in the vectoriant treatment of anon-human subject.

Cretinapated level of hydrogen peroxide in plasma or whole blood and in the presence of superoxide dismutase (SDD) indicates leukocyte up presence of superoxide dismutase (SDD) indicates leukocyte up presence of superoxide dismutase (SDD) indicates leukocyte up presence of superoxide in plasma or whole blood and in the hydrogen peroxide in plasma or such and allow level in level of hydrogen peroxide in plasma or such and allow level in credition e.g. hydrogen peroxide in plasma or immune compromised condition e.g. hypertension or sepale.
                                                                                                                                                                                                                                                                                                                                                  Use of cell activating compositions in developing products for diagnosis and treatment of e.g. cardiovascular, inflammatory, autoimmune or Alzheimer's diagease, trauma, arthritis, organ rejection, diabetes, stroke or ischemia -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; chromosome mapping; gene mapping; gene therapy; forensic;

The invention relates to isolated polynucleotide (I) and probes, CC polypeptide (II) sequences. (I) is useful as hybridisation probes, cpolypeptide (II) sequences. (I) is useful and hybridisation probes, co polymerase chain reaction (FCR) primers, oligomers, and for chromosome cc and gene mapping, and in recombinant production of (II). The complete of the complete of the control of (II) and the complete of the control of (II) and the complete of (II) is useful for generating antibodies against the detecting or control of (II) is useful for generating antibodies against the detecting or (II). (II) is useful for generating antibodies against the detecting or control of supplement. (II) and its binding partners are useful in medical a food supplement. (II) and its binding partners are useful for treating control of supplement. (II) are useful for treating control of supplements in the polypeptide and polymolectide sequences have applications in the polypeptide and polymolectide sequences have applications in capponsible for generic disorders or other traits to assess biodiversity capponsible for generic disorders or other traits to assess biodiversity capponsible for generic disorders or other traits to assess biodiversity and to produce other types of data and produces dependent on DNA and capponsible for generic disorders of the invention.

Conduction acid sequences of the invention of muran directly from WIPO specification, but was obtained in electronic format directly from WIPO control of the printed produced and produced are control of specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human, cytokine, cell proliferation, cell differentiation;

The invention relates to isolated human polypeptides (which may be cytokines) and the polymucleotides encoding them. The protein is useful and antagonists and antagonists.

Croidentifying a compound which binds to it (e.g. modulators, agonists and antagonists). The polymucleotides are useful as marray for mismatch sources or supplements. The protein exhibits exhibits activity relating success or supplements. The protein exhibits exhibits activity relating to cytokine, cell proliferation, call differentiation, anticinflammatory, suppressing and activin or inhibin related activities. The proteins (and the diagnosis and treatment of diseases and disorders such as cancer, antibodies raised against them) and mucleic acids are therefore useful in creating and peripheral nervous system diseases and neuropathies, and peripheral nervous system diseases and neuropathies, and peripheral nervous system diseases and neuropathies, lateral sclerosis, sproke, myeloid or lymphoid cell disorders, platelet disorders, lateral sclerosis, sproke, myeloid or lymphoid cell disorders, platelet disorders, capeneration of bone, cartilage, tendon, ligament and/or nerve tissue repair, healing of burns, incisions, ulcers, for periodontal disease, lung or liver fibrosis, reperfusion injury in severe combined immunodeficiency (SCID), bacterial or fungal infections, catching assues, various immune deficiencies and disorders including severe combined immunodeficiency (SCID), bacterial or fungal infections, cautoimmune disorders (e.g. multiple sclerosis, rheumatoid arthritis, cutoimmune disorders (e.g. multiple sclerosis, rheumatoid arthritis, date asthma or other respiratory problems, coadulation disorders, chaemophilia), septic shock, sepais, arthritis, neptric shock, sepais, New polypeptides and nucleic acids, useful for diagnosis, treatment of inflammatory, autoimmune, neurological, myeloid or lymphoid cell, bone degenerative disorders, cancer and promoting wound healing Claim 20; Page 308; 336pp; English.

Cisuperfamily: trypsin, trypsin homology
Cisuperfamily: trypsin; trypsin digestion; serine proteinase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    chymotrypsin (EC 3.4.21.1) B precursor - rat
N'Allernate names: chymotrypsinogen B
C'Species: Rattus norvegicus (Norway rat)
C'Species: 28-Dec-1987 #sequence_revision 28-Dec-1987 #text_change 18-Jun-1999
C'Accession: A22658
R'Bell, G.I.; Quinto, C., Quiroga, M.; Valenzuela, P.; Craik, C.S.; Rutter, W.J.
B.B.I. Chem. 259, 14256-14270, 1984
A'Title: Isolation and sequence of a rat chymotrypsin B gene.
A'Reference number: A22658; MUID:85054881; PMID:6209274
                                                                                                                                                                                                                                       ;

TSUKADA H., Blow D.M.;
SELUCIULE OF ALPHA-CHYMOTRYPSIN refined at 1.68-A resolution.";
O. MOI. Biol. 184:703-711(1985).
I. CATALYTIC ACTIVITY: Preferential cleavage: Tyr-|-Xaa, Fer-|-Xaa, Fer-|-Xaa, LoCATION: Extracellular.
I. SIMCELLULAR LOCATION: Extracellular.
I. SIMILARITY: BELONGS TO PEPTIDASE RAMILY SI.
I. DATABASE: NAME-MOTHINGTON PREPTIDASE RAMILY SI.
